

# FORDONS KONTROLL

## Monitor all your vehicles, right from the start !

In your computer, tablet or mobile phone

Fordonskontroll is a web-based system for vehicle administration.

Fordonskontroll is targeted at companies, local councils, county councils and government authorities, and is suitable for vehicle fleets containing anything from tens of vehicles to several thousand vehicles.

Get going immediately - no installation required!

## Test Fordonskontroll for 30 days !

Without any commitments or costs!

Once your application for a test account has been approved, all your vehicles and vehicle information are automatically downloaded from the Swedish Road Traffic Registry.

Right from the start, your entire vehicle fleet is included in the register, including a calendar of current due dates for MOTs.

If there are any comments on any vehicles from the last MOT, an automatically-generated issue report will have been created.

- Go to [www.fordonskontroll.se](http://www.fordonskontroll.se) and click on **Test account**

Some of our  
reference customers  
(More on our website)

### Integration with the Swedish Road Traffic Registry

- Automatically generates a list of vehicles owned
- MOT: outcome and due date
- Vehicle status: driving ban, usage ban, de-registered, commercial transport, etc
- Technical data: length, weight, etc

### Fuel

- Import of purchase data from fuel providers
- Statistics on fuel consumption and emissions

### Management of all inspections

- Due dates and appointments booked: service, tachograph, alcohol lock, cooling, crane, etc

### Fault reporting (web, mobile/app, text message)

- Automatic issue reporting at MOT
- Follow-up, status, priority, notes

### Log book

- Document change of tyres, repairs etc

### Costs

- Can be connected to the log book or issue reports

### Document templates

- Create your own protocols, forms and check-lists: Safety inspections, requisitions, damage reports

### Extra fields (custom fields)

- Field for your own information: codes, serial numbers, equipment, number of pallet spaces etc

### Calendar

- Booked inspections and due dates

### Report generator

- Simple to create your own unique reports

### File upload (pdf, photos, Word documents)

- Can be connected to the vehicle data

### Integrations with MOT providers

- Opus Bilprovning, Besikta Bilprovning and Bilprovningen

### Integration with digital tachograph

- idha-Online and Stoneridge Optac3
  - Automatic import of information (mileage)
  - Due dates for two-yearly inspection (calibration)
  - Date for next tachograph replication

### Integration with staff and time-reporting system

- transPA (Driver issue reports in the time reporting)

### Integrations with the vehicle manufacturer

- Volvo Dynafleet, Scania Fleetmanagement and FleetBoard

### Other integrations (GPS with map functionality)

- PosTrack, TotalCar, TelliQ, Transics, ExyPlus, Automile and ABAX
